MC Config - 20190710161000

ⓘ   This component release is part of MarvelClient 10.1

FIX	OnlineUpdate: Fixed an issue introduced with template 20190702093100, where the next OnlineUpdate would fail with "ERROR in CheckForUpdate 5 in Line 41". This happens due to the field "Update Type?" having an empty value. **Should you encounter this issue when trying to perform an online update, simply select the desired update type and check for update again.**
FIX	Fixed an issue where for some customers the Edit button in forms/documents showed the label "acedit" / would not be translated.
FIX	MCUpgrade Config: Fixed an issue that could lead to a messagebox titled "!!!" and no further content.
ENHANCEMENT	MCUpgrade Config: Added a messagebox displaying a reminder to restart the client after applying changes to JavaMaxHeapSize upon opening of the MarvelClient Upgrade Configurations view.
ENHANCEMENT	MCUpgrade Config: Changed the general exclusion of Citrix clients to optional.
CHANGE	MCUpgrade Config: Changed the default exclusion of Citrix clients to check for BOTH os:citrix_no_logonsessions=0 AND os:citrix=0 (requires re-publishing of an existing upgrade configuration).
FIX / CHANGE	MCUpgrade Config: When (re)publishing an upgrade, the file deployment action will now be set to run persistent instead of once only.
